1. first pack the project as war

```
private int degree;
       private String brand;
       private int year_of_birth;
       private double size;

    ( resources (org.apache.maven.plugins:maven-resources )
     site (org.apache.maven.plugins:maven-site-plugin:3.3)

       Beer(String name,int price,int degree,Stri
            this.price=price;
                                                                 🐆 war (org.apache.maven.plugins:maven-war-plugin:3.3.0)
                                                                    mar:exploded
            this.degree=degree;
                                                                    mar:help
                                                                    mar:inplace
                                                                    m: war:war
                                                            > 🔐 Dependencies
